- Our strengths make us a relative winner

# Active de-risking to strengthen our capital position

## Key levers

## Examples

Further de-risking of peripheral counterparty and sovereign exposures

- Concentrate sovereign exposures in domestic carriers
- In domestic carriers reduce exposure in the P/C segment
- Where locked policyholder capital available, use spreads to close duration gap (Allianz Leben)

De-risking of net exposure to financials

- Reduction of sub-bond banking exposures
- Unicredit and Commerzbank de-risked
- Reduction of un-collateralized banking exposure in cash-pool

Optimize interest rate and spread sensitivity

- Selective duration management measures
- Enhanced life product design and inforce management approach
- Liquidity monitoring and buffer enhancements for lapse risk

Focus investments on businesses with stronger cash returns and lower tail risk

- Closure of life unit in Japan
- Focus on P/C and AM growth initiatives
- Further reduce exposure to mis-priced markets (e.g. high value of O&G, high NatCat exposures)
- Use existing levers in VA business

# Resilient pricing supports P/C earnings power

## Effective price impact on portfolio (in %)

- Renewal prices with upward trend
- Stronger developments in Germany and France offset weaker trends in Italy, Spain, UK and Australia
- Growing combined ratio benefit from overall price development

1) Actual rate change on YTD renewals for Allianz flagships Germany, Austria, Italy, France, Spain, US, UK, Australia, Ireland, excluding Credit Insurance

2) Overall benefit from total price change including renewed business and new business

# L/H margins remain healthy despite low interest rates

## Business in force

(based on aggregate policy reserves)

## New business

1) Based on IFRS current interest and similar income

2) Weighted by aggregate policy reserves
