Executive Summary

- 88 days after the Italian parliamentary election, and an episode of exceptional financial market stress later, the Five Star Movement (M5S) and the Lega have sealed their governing alliance. Significant uncertainty remains however regarding the political and economic outlook. We defined four key political scenarios based on the fiscal measures implemented by the government and their relationship to the European institutions.
- Baseline scenario (50%) foresees the government back down from its initial confrontational EU-stance and ultra-expansive fiscal proposals. Following a policy U-turn it implements only a portion of announced fiscal stimulus and finds a conciliatory approach with Europe. Italian 10-year spreads to the Bund will remain between 180bps and 250bps. GDP growth would more than halve by 2020 to 0.6% with debt-to-GDP embarking on an upward trend to 134% by 2020.
- Upside scenario (30%) assumes the implementation of limited fiscal measures while the government maintains a constructive approach towards Europe. Spreads would still be elevated with less volatility, GDP growth would moderate to 1% in 2019/2020 while public debt stabilizes at 132% of GDP.
- Downside scenario (15%) assumes a sharp rise in fiscal spending with the coalition embarking on a collision course with the EU. Spreads would rise by an additional +200bps compared to the baseline; Italy could slip in a shallow multi-year recession with debt rising above 140% by 2020.
- Italexit (<5%) assumes that a political event or a market default, combined with a confrontational stance causes substantial financial stress (spreads up by +500bps to the baseline). Italy would undergo a very deep recession with debt-to-GDP rising towards 160% by 2020. Contagion would follow.
- In its relation with Italy the European Union will have to strike a delicate balance between upholding its own rules while at the same working constructively with the new government with a view on making more tangible progress on EU reform.

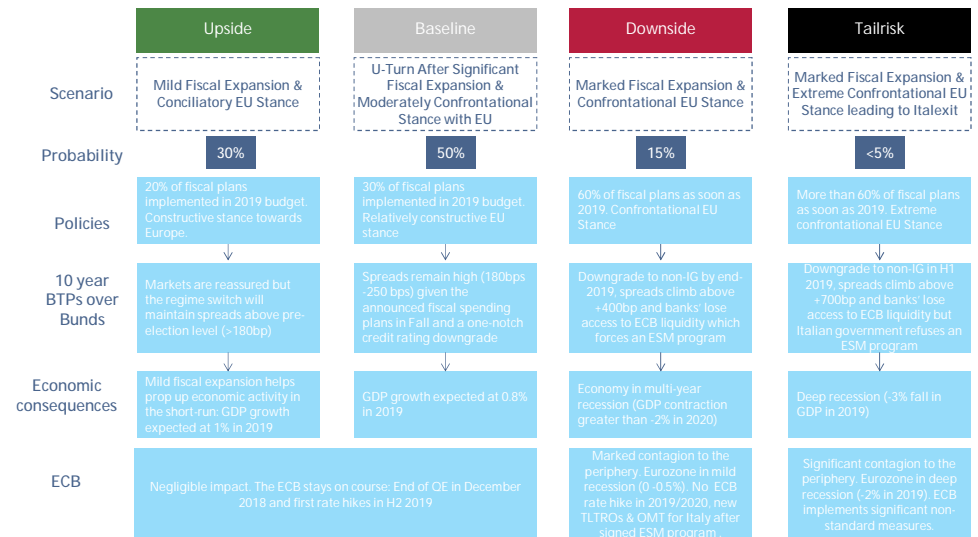

What's next for Italy? Four scenarios for 2018-20

88 days after the Italian parliamentary election on March 4, and after one failed attempt to form a governing coalition that triggered an episode of exceptional financial market stress, the Five Star Movement (M5S) and the Lega parties sealed their governing alliance. Nevertheless significant uncertainty remains regarding the political and economic outlook for Italy particularly given the M5S/Lega government's ultra-expansive fiscal policy which includes tax cuts and higher spending to the tune of EUR126bn (about 7% of GDP). There are

significant doubts regarding the government's ability to implement the proposed fiscal plans given institutional curbs. In addition, further financial stress may as well as limit appetite for Italian government bonds.

There are four key scenarios depending on the new government's policy choices.

Figure 1: Economics and Policy-Making

Sources: Allianz Research

1) *Baseline: Policy U-turn after Significant Fiscal Expansion combined with Moderately Confrontational EU Approach*

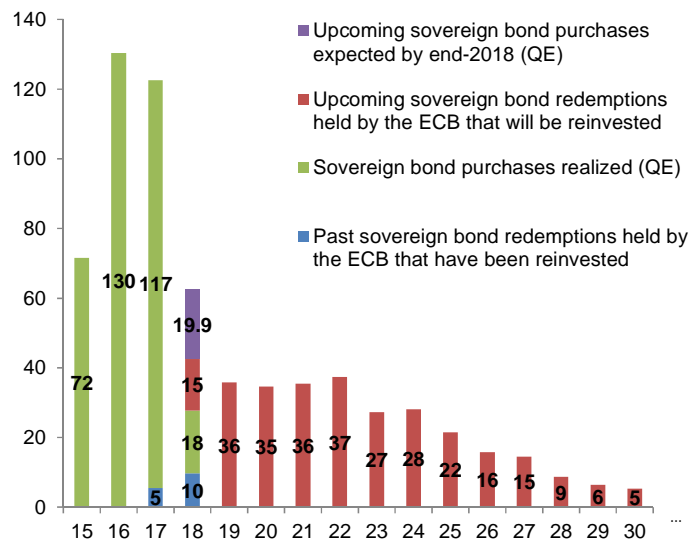

Our base case considers significant fiscal expansion coupled with Eurosceptic rhetoric to trigger a notable increase in market tensions. Substantial financial stress will prevail fueled by the downgrade of Italy's sovereign rating by one notch following the presentation of the government's 2019 budget plans in October. This helps explain the expected U-turn in fiscal profligacy (30% of the proposed measures in 2019; 10% additional in 2020), and in the confrontational posture with the EU.

Such assumptions lead to a fiscal multiplier boost of +0.4pp to GDP growth as soon as 2019 but the deterioration of the fiscal deficit from -2.3% of GDP to -3.5% is expected to keep sovereign bond spreads relatively elevated (above +200bp over the 10-year compared to the Bund). In addition, fickle confidence will be a drag on the private sector. Overall, we expect GDP growth to reach +0.8% in 2019 after +1.2% in 2018. Keeping a positive primary balance initially helps avoid a more significant deterioration in market sentiment towards Italy. We estimate the fiscal primary surplus to fall from +1.5% of GDP to +0.3% before turning negative in 2020 – for the first time since 2009. Italian public debt will rise to 134% by 2020 up from 132% of GDP in 2019. The fiscal deficit is expected to be greater than -4% of GDP in 2020.

The spillover to other peripheral countries is expected to remain contained. The ECB will stay on course by extending its QE program until end-2018 and increase interest rates for the first time in H2 2019. For the ECB to do more, financial stress would have to be more tangible: (i) a broad flattening of yield curves endangering banking system liquidity access; (ii) a significant loss of confidence among Eurozone banks (Euribor-Eonia spread above 1%; and (iii) peripheral spreads durably above +400bp. Overall, the ECB holds EUR345bn of

Italian public debt (around 18% of total bonds outstanding). Starting in 2019 we expect the ECB to buy Italian bonds as part of the reinvestment of principal only following its QE exit. The average monthly amount of ECB purchases of Italian bonds will be EUR3bn compared to almost EUR4bn since the start of 2018 or around EUR10bn in 2017.

2) Upside: Mild Fiscal Expansion & Conciliatory EU Approach

Our upside scenario sees the Italian government adopt a constructive stance towards Europe and abandon the vast majority of its fiscal plans, implementing only 20% of the proposed measures. This will reassure financial markets. The mild fiscal expansion props up economic activity in the short-run while triggering only a slight increase in refinancing costs.

In this scenario Italian GDP growth is expected to average +1% in 2019-20 after +1.3% in 2018. Given an increase of the fiscal deficit to above -3% of GDP by 2019, debt-to-GDP ratio would hover around 131% over the forecast horizon down from 132% in 2017. The impact on the Eurozone is likely to stay negligible as contagion to the periphery would remain low.

3) Downside: Considerable Fiscal Expansion & Confrontational EU Approach

Our downside scenario includes the governing alliance's pushing ahead its expansive fiscal spending plans while maintaining a persistent confrontational attitude towards its EU partners. This would in turn fuel rising concerns about the sustainability of Italian debt, the stability of its banking sector as well as its euro-membership. The sharp adverse market reaction eventually raises heightened concerns about Italy's ability to access financial markets. A revival of the 2012 episodes would follow.

The deterioration in public finance fundamentals is expected to be rapid with the fiscal deficit greater than -5% of GDP as soon as 2019 (from -2.3% in 2018) and public debt increasing by +6pp to 137% of GDP. The primary balance registers its first deficit since 2009 at -1.3% of GDP which keeps BTP spreads to the Bund above +400bp. The Italian economy enters a multi-year recession with GDP contracting by more than -2% in 2020 alone and there is marked contagion to the periphery.

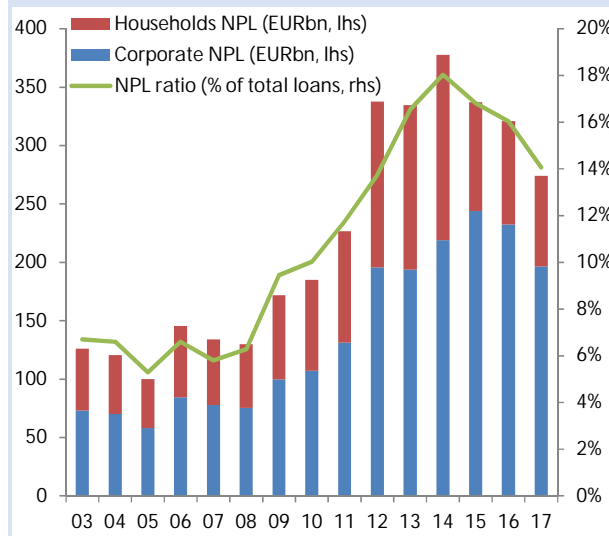

Italy's sovereign debt could be downgraded to non-investment grade as early as H1 2019 pushing the ECB to exclude Italy from its asset purchase program and to no longer accept Italian sovereign bonds as collateral in Eurosystem credit operations. The sharp deterioration in market sentiment would trigger a banking crisis. Italy is left with no other choice than to seek an ESM program in an effort to avert a sovereign debt default and subsequent euro-exit. In that case, the ECB could use the full toolbox: Outright Monetary Transactions (OMT); Emergency Liquidity Assistance (ELA); and resume non-standard measures such as Targeted Longer-Term Refinancing Operations (TLTROs).

As a result no ECB rate hike will be implemented until at least 2021. The Eurozone economy is likely to experience a contained recession with GDP contracting by less than -0.5%.

Box: The downside scenario would dry up credit to SMEs

Banks' liquidity risk remains a concern should the shock on Italian financial conditions persist or worsen. If we simulate the spread shock as per our downside scenario, the rise in political uncertainty and the impact on banks' refinancing costs would drive bank rates on loans to SMEs up to 4% from below 2% currently. The +200bp increase in bank loans rates would call for Italian SMEs to use +9pp of their operating surplus to pay the additional interest expenditures on debt. This would mean that as much as 20% of their margin would be used for interest expenditures, which would weigh on their ability to expand investment. In this case, the ECB would likely renew its liquidity support through targeted longer-term refinancing operations (TLTRO).

4) Italexit

The extreme case of an Italexit cannot be ruled out; but it remains highly unlikely (<5% probability). In that case, not only the government coalition would pursue a marked fiscal expansion coupled with a confrontational EU stance, but a specific event triggers the perception that Italy becomes a systemic risk to Europe. Possible triggers include: the refusal of Europe's financial aid - through the ESM e.g. - because of too stringent conditionalities; a technical default from the Sovereign or a large bank; or a negative outcome to a referendum called by the government, following a constitutional change. The ECB would have to step in to safeguard financial stability.

Spreads would rise by +500 bps from current highs and spillover effects to Eurozone countries would be very concerning. In this tail risk scenario the recession in both Italy and the Eurozone will be deep with GDP contracting by -4.5% and -3.0% in 2020 respectively. Meanwhile Italy's fiscal deficit would reach -6.5% in 2019 and rise above -7% in 2020 while public debt would reach 155% of GDP in 2020.

Figure 3 summarizes economic estimates under our four scenarios:

Figure 3: Scenarios - Fiscal and Economic Impact

	2017	30%				50%			15%			<5%		
		Upside scenario				Baseline scenario			Downside scenario			Tail Risk scenario		
		Mild Fiscal Expansion & Conciliatory EU Approach				U-turn After Significant Fiscal Expansion & Moderately Confrontational EU Approach			Considerable Fiscal Expansion & Confrontational EU Approach			Italexit		
Expected Implementation of proposed fiscal measures (% of total)	20% - repeal of past reforms with very limited leeway to include new spending plans				40% - repeal of past reforms with limited leeway to include new spending plans			60% - repeal of past reforms and significant new spending measures			above 60% - repeal of past reforms and significant new spending measures			
	2017	2018	2019	2020	2018	2019	2020	2018	2019	2020	2018	2019	2020

Finding the right tone of voice: Europe's amenability will be pivotal

In its relations with Italy, the European Union will have to strike a delicate balance between upholding its own rules and working constructively with the new government, especially with a view to making tangible progress on EU reform. We do not foresee a showdown between the EU and Italy in the near future.

Anti-EU election rhetoric notwithstanding, it remains unclear what the European policies of the new government in Rome will look like. The men in charge of the finance and foreign ministries, and hence of the day-to-day management of EU relations, are rather pro-

European. While party leaders di Maio and Salvini may continue attacking the EU publicly, constructive behind-the-scenes diplomacy may proceed in parallel.

Upcoming meetings of Eurozone finance ministers and EU heads of state between June 26 and June 29 will give first clues. The first big test of EU fiscal rules should come in autumn, when Prime Minister Conte will present his 2019 budget plan to the Commission. Given the extensive spending and tax cut pledges of the new government, we expect Italy's public deficit to increase under any of our scenarios. We do not expect the EU to immediately take a tough stance on Italy. On the contrary, the EU will likely seek to make some progress on migration management, since large inflows of migrants across the Adriatic are the top concern of Italian voters. With some Central and East European governments still staunchly opposed to any compulsory resettling of refugees, the other EU partners may decide to increase fiscal help to Italy in managing the inflows and resettlement.

Italy has traditionally punched below its weight in EU politics. Now, with the UK leaving, it will be the third largest EU member state and its engagement will be indispensable for progress on much needed reforms of the Eurozone, EU security policy and a European migration policy. This is why it is so important that a disagreement about budget numbers does not result in a break between the EU and Italy that may then take years to repair.

ABOUT ALLIANZ

The Allianz Group is one of the world's leading insurers and asset managers with more than 86 million retail and corporate customers. Allianz customers benefit from a broad range of personal and corporate insurance services, ranging from property, life and health insurance to assistance services to credit insurance and global business insurance. Allianz is one of the world's largest investors, managing over 650 billion euros on behalf of its insurance customers while our asset managers Allianz Global Investors and PIMCO manage an additional 1.3 trillion euros of third-party assets. Thanks to our systematic integration of ecological and social criteria in our business processes and investment decisions, we hold a leading position in the Dow Jones Sustainability Index. In 2016, over 140,000 employees in more than 70 countries achieved total revenue of 122 billion euros and an operating profit of 11 billion euros for the group.

ABOUT EULER HERMES

Euler Hermes is the global leader in trade credit insurance and a recognized specialist in the areas of bonding, guarantees and collections. With more than 100 years of experience, the company offers business-to-business (B2B) clients financial services to support cash and trade receivables management. Its proprietary intelligence network tracks and analyzes daily changes in corporate solvency among small, medium and multinational companies active in markets representing 92% of global GDP. Headquartered in Paris, the company is present in over 50 countries with 5,800+ employees. Euler Hermes is a subsidiary of Allianz, listed on Euronext Paris (ELE.PA) and rated AA- by Standard & Poor's and Dagong Europe. The company posted a consolidated turnover of €2.6 billion in 2016 and insured global business transactions for €883 billion in exposure at the end of 2016.
